(71) Applicant: **Combi Corporation**
Taito-ku, Tokyo (JP)

(54) **Child seat**

(57) In a receive base 3 forming a child seat 1, there is disposed a set angle adjusting mechanism 5 which, in accordance with the angle of a vehicle seat 2, extends a primary rotary plate or the primary rotary plate and a secondary rotary plate simultaneously in a rotating manner to thereby interpose the same between the receive base 3 and vehicle seat 2. According to the present structure, the angle of the receive base 3 can be freely set regardless of the angle of the vehicle seat 2. Also, the set angle adjusting mechanism 5 may be interposed between the receive base 3 and the seat main body of the child seat in such a manner that it is able to adjust the angle of the seat main body. An angle display device is disposed in either of the receive base or seat main body, so that the above-mentioned angle can be confirmed while setting the same. This can enhance the convenience and safety of the child seat to a great extent.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 10 6185

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
